

Lake Detroiters Association

Detroit Lakes, Minnesota

The 1987 Yearbook

PRICE
\$2.00

Pelican River Watershed District

Established: May 27, 1966

**A Governmental Body with Tax Levy & Assessing Power
Appointed by County Commissioner**

Present Board of Managers

John Youngquist - President
Pete Caron - Vice President
David Fihn - Secretary
Roger Hesby - Treasurer
Charles Roper - Manager

Our activities are coordinated with - City, County, Township, MnDOT, DNR, MPCA, EPA, Corps of Engineers, Lake Associations and BCSWC District.

Present Staff

Bill Briggs - Attorney
Gary Nausen - Engineer
Don Klomstad - Executive Secretary
Morris Estenson - Assistant Exec. Secretary

Current and Continuing Activities:

Weed harvesting on Sallie and Melissa.

1986 Harvest was 295 truck loads - 1,328,000 lbs. of weeds.

This is 463 Lbs. of Phosphorous and 5,685 lbs. of Nitrogen removed from the lake system.

We are investigating ways to make improvements upstream from Big Detroit and Salle to improve water quality.

Re: Big Detroit

1.) We would like to develop a large holding pond or sedimentation basin between Hwy. 34 and Old Rice Lake with a control structure.

2.) Continuously work with the City to improve quality of discharges from streets, etc. into the Pelican River.

Re: Sallie

1.) Aeration and chemical treatment of St. Clair Lake and/or

2.) Chemical treatment of St. Clair Lake discharge

3.) Diversion of St. Clair discharge to have sheet flow over wetland area

4.) Harvesting of cat tails in wetland area to remove nutrients from the system.

We are purchasing additional weed harvesting equipment for more efficient operation. We will be able to work closer to shore, have a longer season and easily move to other lakes.

Most of the improvements we are considering now are costly. We are looking at the utilization of Professional Fund Raisers but must have a more definite plan before proceeding. We are working with the Minneosta Pollution Control people in St. Paul and Federal assistance.

LAKE DETROITERS

The Lake Detroiters Association was founded in 1948 with an overall goal to promote and protect the quality of Big and Little Detroit Lakes. The overall purpose of the association is still to promote and protect both Big and Little Detroit Lake in Becker County, Minnesota; including the waters running into and therefrom, and the land contiguous thereto.

To be more specific our goals are to promote annexation to the city of Detroit Lakes, those areas of Big and Little Detroit Lakes not already annexed by said city, for the purpose of supplying sewer and water. We intend to contact present owners of property around the lake for the purpose of advising the pro's and con's, including approximate individual cost of annexation. A letter with an application for membership and a respond section, will be sent out.

Another goal is to promote clean up operations of our lakes, (weeds, silt, rough fish etc.). This would involve research for feasible methodology including equipment and costs and research funding resources. We would also work closely with DNR on items relating to Fish

Stocking, Public Accesses, Lake Levels, etc. where DNR action is required. We would also invite a qualified representative to sit in on specified Association Board Meetings, General Membership Meetings and Special Meetings when appropriate.

Our next goal, or overall purpose, is to develop and maintain communication with and among DNR, watershed district general community, said lake owners and appropriate governmental agencies to accomplish this overall mission of the Association. We would like to establish a Public Relations Committee (Standing) made up of members from the board and general membership and also media personnel with the special affiliations, skills and talents to effectively publicize the Association Mission and its long range goals and objectives.

These goals can be more easily achieved by a large and active membership. This will provide us with the operating capital, volunteer committee members, and ideas to help protect and preserve our environment, property values and way of life.

FROM: Dean Ash Department of Natural Resources Fisheries Headquarters

Detroit Lake and all other major walleye lakes in this 6 county management area were not stocked with walleyes for a two year period to assess walleye natural reproduction. For most of the lakes this took place in 1983 and 1984. Testing netting in 1986 was used to evaluate the results of this stocking blank. As a result of this evaluation, some lakes were dropped from the stocking list, some have stocking unchanged and some will receive additional walleye stocking.

Detroit was found to have strong natural reproduction in the two non-stocked years. Stocking on Detroit has been on a yearly basis since 1971. Based on this evaluation, the stocking program will be changed to every third year with 1,822 pounds of walleye fingerlings, about 45,550 fish, scheduled for the lake. The overall walleye population is not at our target level of 8 per gill net lift for the lake. The stocking program plus natural reproduction should bring the population to the target level in a short time. The next walleye stocking is due in the fall of 1988.

Future test nettings will be used to evaluate this management plan. Future stocking of the lake will be based on what is found from the test nettings.

The current walleye population is 7.4 per gill net lift with an overall average weight of 1.3 lbs. per fish. For comparison the state-wide number per gill net set is 3.60 with an average of 1.1 lbs.

The following has been the walleye stocking for Detroit:

1978	1,500,000 fry 628 lbs., 22,701 fingerlings
1979	349 lbs. 10,205 fingerlings
1980	943 lbs. 25,289 fingerlings
1981	1,000,000 fry

1982	357 lbs. 24,908 fingerlings
1983	No stocking
1984	No stocking
1985	1759 lbs. 40,752 fingerlings

We will be concentrating our stocking every 3rd year instead of smaller amounts each year.

DETROIT LAKE SEWER LINE EXTENSION

The most frequent question asked by property owners on the lake is, "What can I do about the weeds?" Approaches such as harvesting, chemical treatment or dredging are the best bandaid approaches to the problem. These methods attack the result of the problem, not the cause. The weed problems on lakes are caused by nutrient enrichment of the lakes from sources such as agricultural runoff, lawn fertilizing and leaching of nutrients into the lake from septic systems. One pound of phosphate will fuel the bloom of 500 lbs. of algae. Until the nutrient enrichment of the lake is stopped or greatly curtailed, the weed problem will increase. Cutting down on the amount of lawn fertilizer used close to the lake and hooking all residences to a sewage collector system will be big steps in the right direction for overall lake weed control.

LAKE DETROITERS ASSOCIATION

—Roster of Active & Sustaining Members—

NAME	ADDRESS	STATE & ZIP	PHONE
Mr. & Mrs. Bennitt Aarestad	East Shore Drive	Detroit Lakes, MN 56501	
Mr. & Mrs. Alvin Ackerman	Rt. 4 Box 288	Detroit Lakes, MN 56501
